Hyeon-Seong Kim

wnenrn60@gmail.com | linkedin.com/in/hyeonseong-kim-quant

Seoul, Republic of Korea

Education

Hanyang University Sep 2020 – Present

Integrated M.S.–Ph.D. Program in Business Administration (Finance), Coursework Completed (Feb 2026)

Advisor: Prof. Hyoung-Goo Kang | GPA 4.19/4.5 | Comprehensive Examination Passed

Dissertation: Disagreement Pricing under Information and Institutional Frictions: Evidence from Machine Forecast Disagreement in Korea (expected Feb 2027)

Hanyang University

Bachelor's Degree in Financial Management Feb 2020

Publications

Kim, H.-S., Kang, H.-G., & Han, B. (2026). A zero-versus-any analyst coverage threshold in disagreement pricing. Applied Economics Letters. https://doi.org/10.1080/13504851.2026.2740167

Working Papers

Short-sale constraints and the disagreement premium: Evidence from Korea's ban episodes.

Foreign ownership and the disagreement premium: Evidence from Korea.

Professional Experience & Projects

Quantit and Handa Partners

Researcher, Financial Modeling Division Nov 2019 – Present

- Agentic Alpha & Portfolio Platform: Built LLM-agent pipelines for large-scale alpha curation, a walk-forward-validated portfolio construction engine, and an analysis report engine; deployed to production (2026).
- AI Investment Debate Platform: Designed persona-based LLM agents and launched a production web service for AI-driven market discussion (2026).

- LLM-Based Investment Infrastructure: Built end-to-end price distribution models (Korea/US; gradient-boosted quantile models) with a daily production pipeline; developed an LLM system for automated weekly market briefings in production.
- Active Core Portfolio Optimization: Redesigned alpha combination framework across market cap universes; decomposed out-of-sample performance of the production model to guide its redesign.
- Target-Date Fund Glide Path: Developed glide-path asset allocation models for TDF products (2026).
- Guru-Based Factor Rotation: Developed dynamic factor rotation models based on 15 renowned investors' strategies using Sparse Jump Model and dimensionality reduction techniques.
- News-Based Early Warning System: Built market-risk indicators for S&P 500/KOSPI; enhanced with LLM-based topic modeling and sector attention indices.
- SPY-VIX Strategy Development: Developed macro-driven alpha models with scoring-based position sizing; integrated keyword-based sentiment signals.
- Quantitative Strategy Development: Developed ML/DL strategies and factor models across multiple markets.
- AI-Augmented Development Environment: Built coding infrastructure with Claude MCP and GPT integration; developed reusable skill modules via Claude Code.
- External Client Delivery: Delivered alpha signals for a B2C fintech product.
- Market Forecasting Strategy: Built a market-forecasting strategy and migrated its computation to the cloud.
- Macroeconomic Indicator Development: Created macro indicators for portfolio drawdown control.
- Social Value Assessment (NLP): Developed NLP-based ESG indicators, presented at a finance conference.

Hanyang Biz Lab (Informatics Lab) Mar 2019 – June 2019

- Generated unstructured leading crisis indices for Samsung Asset Management under the Ministry of Employment and Labor.

Daumsoft

Intern Jan 2019 – Mar 2019

- Developed industry and sentiment lexicons based on the Dart electronic disclosure system.

L.POINT Big Data Competition Dec 2018

- Developed trend predictions and preference indices based on online behavior.

Hanyang Finance Engineering Society Sep 2018 – June 2019

- Conducted data processing and machine learning algorithm studies using R and financial data.

Technical Expertise

- Languages: Python, R, SQL
- ML/AI: PyTorch, TensorFlow, LLM (GPT/Claude API), NLP
- Infrastructure: Real-time Data Pipeline, Cloud (AWS)
- Domain: Quantitative Analysis, Factor Modeling, Portfolio Optimization

Certification: Certified Investment Manager Mar 2024
